Dr. David Steenblock, D.O. is the interdisciplinary medical genius taking roads untraveled to find ultimate healing for his patients with a focus on stem cell therapies. "I enjoy studying," he says from his private library with an amassed collection of over 60,000 medical books and millions of research papers, "I'm always looking forward - What is the greatest thing that we can do which hasn't yet been done?" Dr. Steenblock often does just that. Whether he is credited or not with his long line of incredible breakthroughs in the medical realm, he has devoted his career to the diseases which most ail and traumatize the human condition. Known often as the 'Stroke Doctor' he is credited with implementing adult (non-embryonic) stem-cells to significantly repair blood flow to the brain, gifting patients with a revitalization of balance, faculties and normal sense-of-self. Stem cells, the earliest type of cell in a cell lineage, have the ability to promote growth and healing throughout the entire human body, in turn giving Dr. Steenblock the ability to heal and regenerate the body from the inside out in an unlimited number of procedures. He has used stem cells to significantly heal patients suffering from ALS, Alzheimer's and Dementia, Chronic Pain, Strokes and Traumatic Brain Injury, Heart Disease and Cerebral Palsy, including the discovery of brain barrier breach and cervical spine damage in patients with ALS.

Dr. Steenblock's love for humanity and desire to relieve suffering grew from his early years on his family farm in Northern Iowa, where he viewed his natural environment as a great source of education. "When I was four years old we had one instance of a horse who died at an early age, and in those times - living on a dirt road on a 40 acre farm - the veterinarian decided to do an autopsy right there in the yard. The vet started to show me the insides of the horse and how the systems worked together, and I decided it was very complicated. I decided then and there to study enough to learn about these systems within humans.

It is within this beautiful environment that Dr. Steenblock's moral foundation was set in stone. "I was very much intrigued and in love with my parents and family, and wanted everything to stay like it was because I was having a good time. That is how I became interested in anti-aging and trying to see what I could do to help my parents stay alive. My interest in preservation continues to this day," and the practice has seen booms in not only utilizing regenerative medicine to heal debilitating injury and disease, but also from the set of individuals who are interested in staying, looking, and feeling young forever.

The doctor has created a break-through supplement called Stemgevity which utilizes encapsulated stem cell growth activators to help patients relieve pain, promote tissue regeneration, stimulate collagen, and see fast results in overall youth-factors. Within his practice, he is able to mobilize over 760 different genes involved with forming new blood vessels and capillaries for growth, repair, and regeneration - one of the many reasons that patients are known to travel from all over the world to see the famous doctor.

Dr. Steenblock has studied extensively at Iowa State University, and has completed residencies at Providence Hospital in Seattle, Washington; Case Western Reserve University in Cleveland, Ohio with Anatomic and Clinical Pathology; at the University of Oregon, Health Sciences Center in Portland; has served as National Undergraduate Research Trainee under John Mutchmore, Ph.D; National Science Foundation Cardiovascular Trainee; Teaching Assistant, Biochemistry and Physiology at the University of Osteopathic Medicine in Des Moines, Iowa; Research Assistant, Biochemistry Research Lab University of Osteopathic Medicine in Des Moines, Iowa under David Celandier, Ph.D., co-discoverer of Urokinase; as a Research Assistant in the Hematology Division at the University of Washington, Seattle, WA under L. Harker, M.D; developed a general practice model for Washington/Alaska Regional Medical Program; has worked in emergency medicine in various hospitals in Cleveland; worked alongside Dr. Carl Ebnother, Cardiologist in general practice; served as the Director of the Nutribar Laboratory in Foster City, CA for over twenty years; founded the The Brain Therapeutics Medical Clinic in Mission Viejo, California; founded The Steenblock Research Institute, Inc in 2003; and has worked in his own practice for regenerative medicine providing bone marrow therapies for patients with chronic degenerative disease and/or interests in anti-aging in San Clemente, California since 2006.

Dr. Steenblock is the recipient of several awards including but not limited to: National Science Foundation Undergraduate Research Participant 1963; Fellowship at the National Institute of Health - Cardiovascular Fellow; Charles H. Farr M.D., Ph.D. Pioneer Award For Outstanding Achievement in Research and Development of Oxidative Medicine in April of 2002; and the Lifetime Achievement Award "To the betterment of mankind and the advancement of integrative medicine" from the Academy of Comprehensive Integrative Medicine (ACIM) in Orlando, Fla on October 23, 2015.

He has written two books: Chlorella: Natural Medicinal Algae, and Umbilical Cord Stem Cell Therapy, The Gift of Healing from Healthy Newborns co-authored with Anthony G. Payne, Ph.D. Dr. David Steenblock is the global expert on stem cell medicine and regenerative therapies, and his heart is morally in a place that goes far beyond the basics of scientific discovery. "My eighth grade teacher had a sign in our classroom that said, 'If you want to want to leave your footprint in the sands of time, you'd better wear work boots.'" Dr. Steenblock is a stellar example of a man, utilizing all of his time and resources, in an effort to greatly contribute to the quality of life of those he serves.
